# [Recycling application]

[PROJECT MANAGEMENT]

Made by FCI Students 2021  
[SECTION 5]

ASUIT UNIVERSITY

# RECYCLING APPLICATION

## PROJECT ID

<b>Project name</b>	Recycling application
<b>description of app</b>	This application connects people and large companies that contain waste that can be recycled
<b>Team members</b>	<ol style="list-style-type: none"><li>1. Mahmoud saber attya</li><li>2. mahmoud said omar</li><li>3. Mohamed naddy mohamed</li><li>4. Mahmoud Hussein Mohamed</li><li>5. Mahmoud salah abdelatty</li><li>6. Mahmoud ahmed elrafiy</li></ol>

# RECYCLING APPLICATION

## Summarization of problem

Humans and life creatures suffer every day from environmental pollution and harm, and it has become a big problem that is aggravating day by day, such as the formation of mounds of waste, the killing of fish in the oceans and climate change.

## Project Objectives

1. To reach the culture of recycling to many people through the application
2. Dispose of waste and used equipment by recycling
3. Financial return from recycled products
4. Protecting the planet from environmental and climate damage

## Planning

1. Making an application that connects factories and owners of large companies or any facility

2. Setting special conditions for dealing between us, such as determining the type of waste with the customer and the quantity available to him, and based on that, the price of the waste is determined with the customer

## RECYCLING APPLICATION

3.Connecting homes through the application takes points that are determined by the type of waste, and these points can be used to purchase food commodities from one of the stores that will be agreed upon.

4.We recycle the waste and then turn it into raw materials such as plastic, aluminum, glass, etc. and sell it to facilities and factories, thus we have achieved a profit and the safety of the environment

## Breakdown Risk Structure

- 1.financial crises
- 2.Missed the deadline for assignments

- 3.The presence of obstacles such as networks and hardware quality
- 4.Having problems dealing with customers

## Scope

- **main objective of application**

The purpose of this application is to reduce waste in the environment and benefit from it extensively through recycling

# RECYCLING

## deliverables

- (software)

Preparing the equipment, servers and networks necessary to establish the project and make a number of models for the application and choose the most appropriate

# RECYCLING APPLICATION

- **(staffing)**

Conducting interviews to select technicians and engineers who are fit to make the application, who establish networks, servers, and equipment With a sum of 100 thousand dollars

- **(Advertising)**

An agreement with an advertising company to promote the idea of the application with the largest number of people and simplify the idea of the application

# RECYCLING APPLICATION

## Milestone

1. Set up devices, connect servers, and operate the network within a month, and under a sum of \$500 thousand
2. Working on a prototype of the application within 45 days

3. When you confirm the mechanism of the initial model of the application and its form, we are working on developing the application to reach the highest efficiency within a month

## RECYCLING APPLICATION

4.Setting the final version of the application, evaluating the application from its experience, and amending defects through observations, within six weeks

5.Making promotional ads for the application and huge advertising campaigns and contracting with companies necessary to implement the points system in food, and this is within two months while saving a sum of money of 200

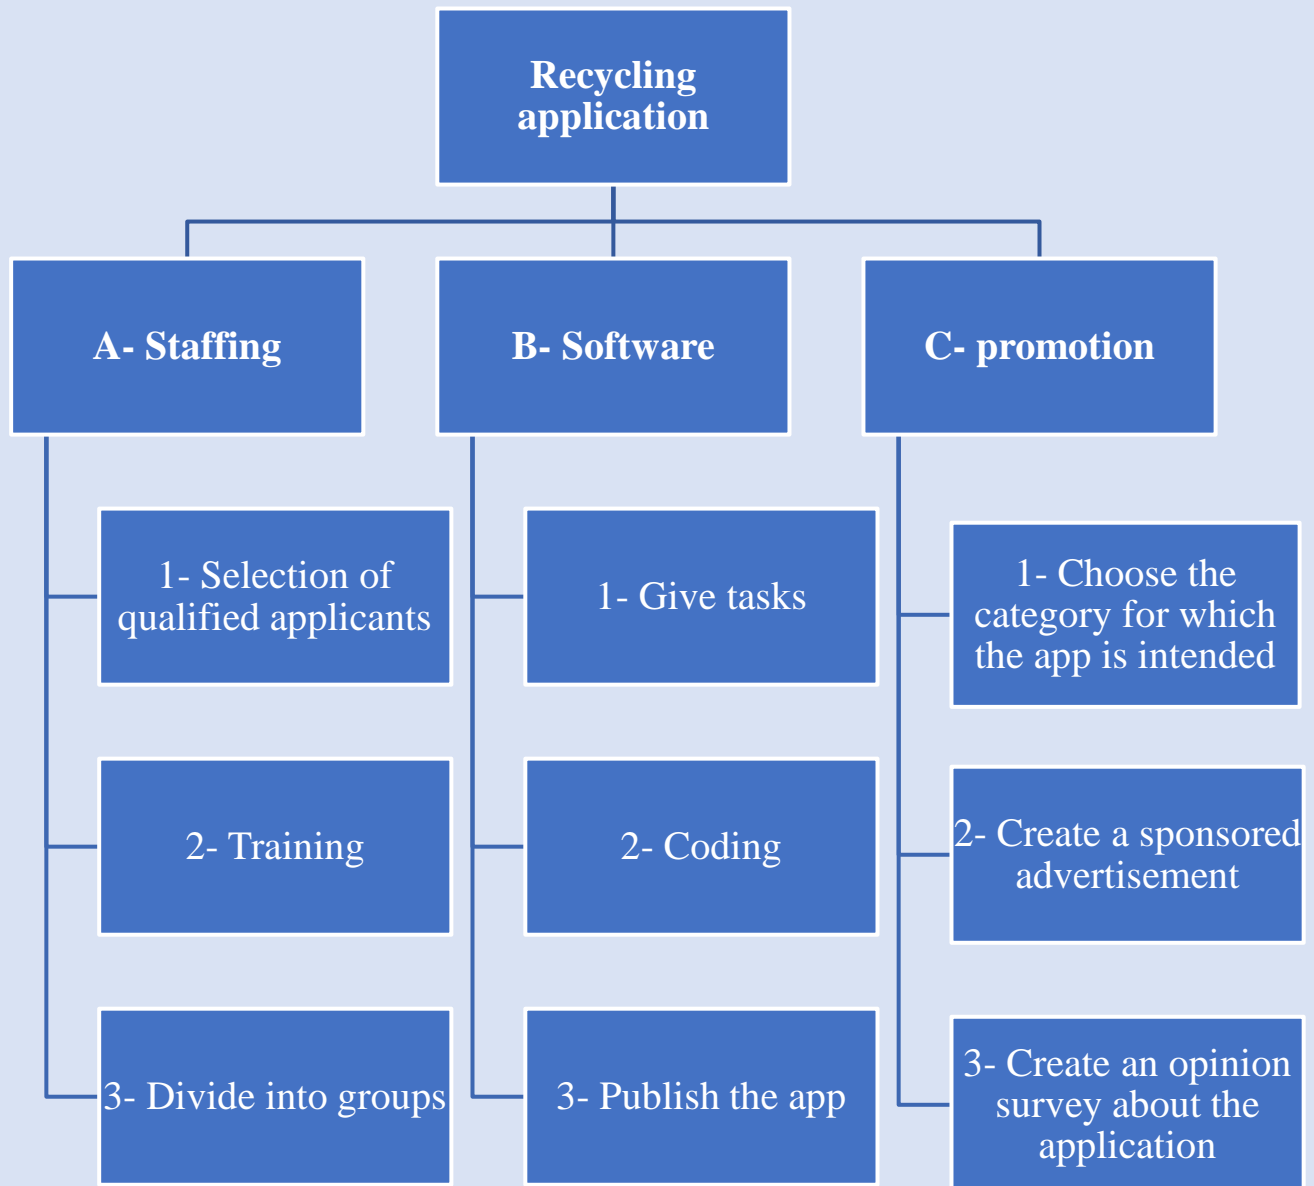

## RECYCLING APPLICATION

Budget	project time	weekly requirements
Through the initial calculations that we mentioned, the total budget is 900\$ thousand	The time required to complete the project is 7 months	<ol style="list-style-type: none"><li>1. Make a weekly report from the administrators on the project</li><li>2. Hold a weekly meeting to discuss project developments and the most important works and achievements</li></ol>
